Hello everyone,

Thank you for being here today. We will be talking about Navigate Buy: Web System for Secure and Simplified Online Shopping Aggregation.

My name is João Oliveira

Hello, my name is Luisa Santos

And I am is Vinicius Valero

What is our theme?

Navigate Buy focuses on the development of a web system that seeks to secure and simplify the consumer's experience with online shopping.

What have we created?

According to Sé (2023), research conducted by the consultancy Offerwise in January 2023 revealed that nine out of ten Brazilians search online before making a purchase. With this in mind, we created a web system that aggregates products and review comments to help find the best deals.

Why did we choose this theme?

Before talking about the justification topic, we can ask ourselves about nowadays, who has never concluded an online shopping purchase?

According to the E-Commerce Brazil (2024) website, e commerce is intended to grow by R\$ 349 billion to R\$ 557 billion in the interval between 2023 and 2027, pointing to the transition of consumption patterns. With this

increase, the need for tools that make online shopping more secure and simplified has become crucial.

Objective:

The general objective is constructing a web system that allows consumers to compare products and prices between different verified e-commerce sites, searching for greater security in their purchases, analyzing the current reviews.

Specific objectives:

- Deep search and research about the difficulties of consumers in their online shopping process;
- Analyze the main requirements of a web system that aims to facilitate the difficulties faced by the consumers;
- Provide the currency conversion in real time, explaining how this facilitates the transparency of prices and reduces the consumer's uncertainty;
- Implement an efficient web application, providing relevant information, and helping to minimize the adversities faced by the consumers;

The Navigate Buy System:

Here are the main features of our system.

On the left side we can see one representation about one search of products across multiple stores and on the right side we can see one representation about review comments, that are indexed by Reclame Aqui.

Methodology:

The methodology adopted included a qualitative and quantitative research, was conducted through books, articles, news, websites, and, for practical implementation with technologies, programming.

Expected impacts:

Imagine a person trying to make an online purchase, spending hours and hours searching for the best price or the best product in safer stores.

With Navigate Buy, this won't be a problem anymore, because, as that person will find what they are looking for in one place, with less time and fatigue and more simplicity and security.

Main Considerations:

Therefore, this project contributes to the advancement of online shopping, providing better offers on purchases.

Here are the references, and finally,

Navigate Buy: Navigate with simplicity and search with more security.
Thank you very much for your attention!
